
These Are Best Bottleneck Calculator 2019

January 11, 2019 The term "bottleneck" is used everywhere when we talk about PC gaming performance. A bottleneck occurs when there is a constraint element. It is also known as bottleneck. If we are talking about the performance of the video card, then the bottleneck may be in the performance of the processor. In the case of a processor, this means that the processor cannot run at a high frequency, and because of this, it cannot perform the tasks you need. In the case of a video card, the bottleneck can be in the size of the video memory or the speed of the shaders. If this is not a bottleneck, then this is just one of the options that you can work around. But that rarely happens.
